

- Regulation of neuron migration
- Cytosolic transport
- Regulation of ERBB signaling
- Modulation of excitatory postsynaptic potential
- Presynapse assembly
- Presynaptic membrane assembly
- Presynaptic membrane organization
- Receptor localization to synapse
- Positive regulation of autophagy
- Positive regulation of exocytosis
- Axon extension
- Negative regulation of cell communication
- Positive regulation of neuron differentiation
- Inositol phosphate metabolism
- Positive regulation of receptor activity
- Postsynaptic membrane organization
- Synapse assembly
- Chemical synaptic transmission, postsynaptic
- Membrane depolarization
- Positive regulation of endocytosis
- Positive regulation of synapse assembly
- Regulation of calcium ion transmembrane transporter activity
- Regulation of calcium ion transport into cytosol
- Regulation of calcium-mediated signaling
- Regulation of endocytosis
- Regulation of neuron projection development
- Regulation of postsynaptic membrane potential
- Regulation of release of sequestered calcium ion into cytosol
- Regulation of synapse assembly

matrix_15

matrix_16

- Regulation of DNA repair
- Glial cell development
- I-kappab kinase/NF-kappaB signaling
- Negative regulation of immune effector process
- Plasma membrane organization
- Vesicle-mediated transport between endosomal compartments
- Negative regulation of endocytosis
- Cellular response to amyloid-beta
- Response to amyloid-beta
- Vesicle-mediated transport in synapse
- Adenylate cyclase-inhibiting GPCR signaling
- Synaptic vesicle recycling
- Negative regulation of cell projection organization
- Regulation of axon extension
- Axon development
- Chemical synaptic transmission
- Regulation of axonogenesis
- Calcium-mediated signaling
- Positive regulation of synaptic transmission
- Regulation of calcium ion-dependent exocytosis
- Positive regulation of neuron projection development
- Regulation of dendrite development
- Synaptic vesicle endocytosis
